

Chip Grabber™

FIRST TIME EVER!
The patent pending
Chip Grabber design
allows you to pick up
chips and remove oil
at the same time!

Patent pending

The Abanaki Chip Grabber removes chips and skims oil from coolant tanks and machine tool reservoirs.

The unique design allows it to pick up steel chips, turnings and grindings from the bottom of the coolant reservoir as well as floating tramp oils from the surface.

The special magnetic tube snakes along the bottom of the reservoir attracting the chips and swarf. As the tube returns to the the Chip Grabber, floating oil is attracted and picked up as well. The result: chip free and oil free coolant.

Standard Features

- Continuously removes chips and tramp oil, decreasing downtime
- Integrated decanter ensures coolant-free oil discharge
- Oil pickup rate of up to 1½ g.p.h.*
- Slide out dump tray for easy chip disposal
- Set up and put in use in just minutes
- Standard tube lengths in reach: 18", 24", 30" and 36". Longer lengths available.

This unit can be easily mounted on the side of virtually any machining center coolant sump. By use of an existing opening or by making a small access cutout, the collector tube runs through the surface of the coolant and collects the unwanted steel chips and tramp oils. The chips are dropped into a slide-out tray, and the oil flows out the discharge tube into any waste oil container.

Technical Information

Dimensions:	11'L x 9'W x 8'H
Weight:	12 lbs.
Motor type:	110v, 60-50Hz
Max. Operating Temperature:	150°F, 66.5°C
